

Save 75% on the cost of Re-chroming Damaged Cylinder Rods

Minor damage to hydraulic rams can be expensive to repair often requiring removal of the cylinder and sending off to be re-chromed costing hundreds of dollars not to mention the loss in down time.

Now there is a system for life time repairs which can be done in the workshop or onsite without removing the ram or the cylinder from the machine .

With less than half a days training (POA) your team can be repairing rams either in the workshop or out on-site with the

On-Site Chroming Repair Kit

on-site Training
